# Can you develop the COVID vaccine in time??

We've been fighting this pandemic for quite some time, and many have lost their lives. Scientist world over have been working hard to develop the vaccine to save us. But the future seems uncertain.

Last night you received an email from Dr. Li Wenliang, a chinese scientist who died a couple of months back. He is believed to have developed and tested a working model of the vaccine (Conspiracy theorist believe even before the outbreak truly happened). But his research lab gutted in a freak fire accident, and all hope was lost. The surprise arrival of this email has given you the chance...

Humanity's only hope is you, Can you develop the COVID vaccine in time??
